Professional Experience:

Walmart eCommerce Mexico

UI Developer and next Design Lead

March 2016 – Till Date

Project: Walmart website (Lancaster)

Description:

The second version of the website of the biggest retail in Mexico.

First version was developed in .net, the second changes all the frontend converted all in SPA

Using ReactJS in views helped to have a better performances displaying the thousand of products.

The individual components developed was the better option to teamwork.

Flux was the architecture that allow us the easily component actualization of store.

The Site was rendered parsing the data we got from web services.

The actualization and optimization of site was better because we don't need full deploys of the site , only the modified modules.

Responsibilities:

Developed front end screens and functionality of reusable modules of the site (React JS).

Define with backend the data format of the webservices answers.

Work with an agile methodology.

Working with UX team to preserve the same look and feel and animations they proposed.

Develop with pure JavaScript and ReactJS.

Adjust CSS Styles thinking mobile first.

Review code from teammates and approved pull requests.

Cross-browser testings.

Resolve issues of production site.

SEO and Analytics implementation on SPA.

A/B Testing's on production.

Management of design team.

Environment: JavaScript, React JS, Flux, SASS, CSS, HTML, JSON, AJAX, SPA .Net

Gerardo Adrián Aburto Vigueras

Sr React – Front end developer

Ingenia Agency

Front End Developer

Oct' 2014 – Sept' 2015

Project: Expocity OCC

Description:

Expocity was a job fair website where companies appears in a little big city where the user selects their stands to views the different job offers from that company.

Was a project that every year was released with new features like airplanes, boats, cars and things that appears on the city.

The project was divided in 2 parts, first the interactive city where every building was a company and the interior of that building where we can saw all the job offers and applied.

The building active areas was svg paths imported from Photoshop.

Was developed in HTML, JavaScript and PHP.

Still online, updated by the agency every year (<https://www.expocityocc.com/>)

Responsibilities:

Interact with the business team to understand the requirements for enhancements.

Create the building interiors HTML templates.

Develop the interaction of the city, vehicle movement, and active areas from buildings.

Import the paths from the PSD city exporting the coordinates.

Interact with design team to optimize all the assets and the image storage.

Cross-Device Testing.

Integrate the job apply actions and Google Analytics events.

Resolve issues of production sites.

Planning task with time and efforts.

Environment: JavaScript, HTML, CSS, SASS, JADE, Gulp, JSON, AJAX, Google Analytics, PHP.

Ingenia Agency

Front End Developer

Nov' 2013 – Oct' 2014

Project: The Mexican Stock Exchange Site (BMV)

Description:

The BMV site was a full redesign from the last version , it would preserve same look in all sections.

It need to be faster and allows a lot of people at same time.

The market activity shows with 20 minute delay and needs to be the real number not rounded.

Lot of components was reused in different sections but with different information.

Still online (<https://www.bmv.com.mx/en>)

Gerardo Adrián Aburto Vigueras

Sr React – Front end developer

Responsibilities:

Interact with the business team to understand the requirements for enhancements.
